KeyMacro is an easy to use and reliable piece of software developed to offer you an effective means of controlling the keyboard and mouse keys with macros. Macros are most commonly used by people who program and are probably one of the most useful features a keyboard can provide. You can use them to create standard functions or perform tedious tasks that you perform time and time again in your normal workflow, but are not practical to be done with the mouse.

However, those who have experience with the keyboard and the mouse might find them of no use, as most of the commands on them are combinations of one or more keys, so you would need to go through your keyboard's keypad, which is something that can be a bit tedious. What if there was a utility that would allow you to control the keyboard with a series of macros that could be saved and applied to any keyboard shortcut? KeyMacro is an utility that does exactly that. It allows you to set keyboard shortcuts on a per-key basis, creating a macro for each key that you need. You can trigger these macros by going into the Mac's Menu bar and pressing a certain key combination. The application features a wide variety of additional features, allowing you to control the Mac's keyboard layout, specify the Menu bar and dock icons as shortcuts and also toggle between keyboard and mouse mode. It also allows you to store macros for specific keyboard types, such as Apple's classic 104-key keyboard or your
